

How We're Making a Difference

In 2023, your generosity enabled our researchers and physicians to study the best techniques to administer chemotherapy medicine to our youngest patients, through the CareMeds intervention. Through this innovative study, caregivers of pediatric patients (ages 2–10) learned how to coax resistant children to swallow bitter medicine, manage medication-related tantrums, and develop strategies to overcome child medication resistance.

One-on-one coaching sessions with caregivers created consistency with children taking medicine, which ultimately minimizes their illness and avoids recurrent hospital admissions, increased health care costs, morbidity, and mortality. Like many others currently underway at Roswell Park, this program is changing lives.

Your donation also has a direct impact on child's life here in WNY. The Courage of Carly Fund provides programs like Prom, Zoo nights, boat rides, Trunk or Treat & much more. In addition, CCF provides support for the entire family throughout treatment, including family psychologists to ensure their mental health is being supported as well.
